CONTENT SYSTEMS.AI

The agent-ready check for brands and 3PLs

What an AI shopping assistant reads before it buys, and who owns each fact: the brand, the warehouse, or both. Go through it together before Black Friday.

Walmart

Opened its store to approved outside AI shopping assistants that search stock and buy for shoppers.[1]

Google

Universal Cart is live in the US, with alerts when a price drops or an item is back in stock.[2]

$200+

Average order for over a quarter of engaged shoppers buying through Meta's Muse assistant, which passed 10M users.[3]

33 in 100

Shoppers say shipping and return policies often or always change what they buy.[4]

Most brands treat this as a website job. It's mostly a warehouse job.

10 facts, and who owns each 1

Tick a fact only when it's right on your live store today. Where it says both, agree who updates it and how often.

	THE FACT	WHAT THE ASSISTANT READS	OWNER	
01	**Stock count**	Units available right now, per size and color. Off by a day means a cancelled order.	BOTH	☐
02	**Delivery date**	An "arrives by" date, not "ships in 3 to 7 days". Assistants compare dates side by side.	BOTH	☐
03	**Same-day cut-off**	The time an order must land by to ship today, and whether weekends count.	3PL	☐
04	**Shipping cost**	The full delivered total, shown before checkout, with no surprise fee at the end.	BRAND	☐
05	**Returns rules**	The window, who pays, and what's excluded, written as text on the product page.	BRAND	☐
06	**Refund speed**	How long from a parcel arriving back to money in the shopper's account. That's receiving speed.	BOTH	☐
07	**Price**	The same price and sale price on your site, marketplaces and shopping feeds.	BRAND	☐
08	**Size and weight**	Product details as text, not only in photos. Weights and box sizes measured, not guessed.	BOTH	☐
09	**Order updates**	Shipped, tracking and delivered updates the moment they happen.	3PL	☐
10	**Back-in-stock date**	A restock date only when the inbound has a real arrival date at the warehouse.	BOTH	☐

Count your ticks. 9 or 10: you're ready, recheck before every big sale. 6 to 8: fix the gaps before peak, starting with 01 and 02. Under 6: an assistant has too little to go on, so start this week.

BRAND lives in your store, listings and policies. 3PL happens on the floor or at the carrier handover. BOTH the warehouse holds the truth, the store shows it.

Where it breaks between you

The facts rarely go wrong on 1 side. They go wrong in the handover between the brand and the warehouse.

STOCK THAT LAGS
The warehouse count updates the store once a night. By noon on a sale day, the store is selling stock that's gone.

VAGUE SHIP WINDOWS
The brand writes "3 to 7 days" because nobody shared the warehouse cut-off and carrier times.

HIDDEN RETURNS RULES
The policy lives in a footer link. The assistant reads unclear fine print as a no.

DETAILS LOCKED IN PICTURES
Size charts and materials sit in images. A shopper that reads text can't see them.

5 questions to ask each other before peak

- [ ] How often does the warehouse stock count reach the store, and what's the lag on a busy day?
- [ ] What's the same-day cut-off this peak, and who updates the delivery promise if it changes?
- [ ] How many days from a return arriving to the refund going out?
- [ ] Who tells the store when an inbound shipment is late, so restock dates move too?
- [ ] If a fact is wrong on the store, who fixes it, and how fast?

Want both sides kept in step, every day?

Content Systems.ai helps e-commerce brands and their 3PLs keep stock, delivery dates, prices and returns rules right across every channel, so an AI shopping assistant picks you. We build on the store and warehouse systems you already use, and your team approves every change. Tell us about your setup and we'll send a free quote with your top AI opportunities.
