4 things AI should never send without your yes

The approval sheet for logistics and e-commerce teams. Fill it in once for each AI helper, pin it where the team can see it, and review it every month.

Anthropic

Its new assistant, Duet, can buy things for you, but every payment waits for your approval.[1]

Walmart

Lets outside AI shopping assistants buy for shoppers, with approval on each purchase or a spending limit the shopper sets.[2]

Microsoft

Told companies to watch the AI helpers they use as closely as staff with the keys.[3]

100+

AI employees run our own company. They draft, sort, quote and follow up all day. Not 1 of them moves money or makes a promise without a person saying yes.

The AI does the work. Your team signs off on what leaves the building.

The 4 actions that always wait

For each 1: what counts, why it waits, and what the AI can still do alone so the yes takes seconds, not minutes.

☐ 01 Money out

APPROVER _____

WHAT COUNTS
Refunds, credits, supplier payments, price changes and new discount codes.

WHY IT WAITS
Money that leaves is hard to get back. At peak, 1 wrong rule repeats across hundreds of orders before anyone looks.

AI CAN STILL
Pull the order, check the policy, work out the amount and line it up for 1 click.

☐ 02 Customer messages that promise something

APPROVER _____

WHAT COUNTS
Delivery dates, discounts, apologies, exceptions to your policy, and any reply to an upset customer.

WHY IT WAITS
A promise in writing is a commitment. Routine answers that only repeat facts on record, like tracking status or your returns window, can go alone.

AI CAN STILL
Draft the reply in your voice, with the order history attached, and mark the line that makes the promise.

☐ 03 Quotes, bookings and contracts

APPROVER _____

WHAT COUNTS
Freight bookings, rate quotes, purchase orders, carrier and supplier changes, anything someone signs.

WHY IT WAITS
A booking commits a truck and a bill. A quote sets a price you'll be held to.

AI CAN STILL
Compare carriers, build the quote, shortlist the best 2 and explain the difference in 1 line.

☐ 04 Deleting or overwriting records

APPROVER _____

WHAT COUNTS
Deleting or archiving data, overwriting stock counts, merging customer records, closing accounts.

WHY IT WAITS
You can't approve what's already gone. A deleted record also leaves a hole in the history you'll need in a dispute.

AI CAN STILL
Find duplicates and stale records, suggest the clean-up and mark each 1 for review.

The rule under all 4: if it leaves the building, costs money or can't be undone, a person says yes first. Everything else, the AI can prepare.

Fill it in for each AI helper

Set a limit and a name for every action. Below the limit, 1 click. Above it, a conversation.

AI HELPER _____ APPROVER _____ REVIEWED ON _____

ACTION	YOUR LIMIT	BACKUP APPROVER
01 · Money out	Up to $_____ with 1 click	_____
02 · Customer promises	Facts on record go alone, the rest waits	_____
03 · Quotes and bookings	Every 1, no exceptions	_____
04 · Deleting records	Every 1, no exceptions	_____

How a yes works

DRAFT
The AI prepares the action with everything you need to decide: the order, the policy, the amount.

CHECK
A named person approves, changes or says no. 1 click when it's right, a quick edit when it isn't.

SEND
Only then does it go out. Every step is on record: who approved what, and when.

Signs your yes is too loose

- [ ] Nobody can say who approved the last refund over your limit.
- [ ] The AI logs into tools with a person's login, so its actions look like theirs.
- [ ] Approvals happen in a group chat, with no record of who said yes.

Want the yes built in, not bolted on?

Content Systems.ai builds AI systems for logistics and e-commerce teams with this approval step inside, on the tools you already use. The AI does the work, your team approves what goes out, and you own what we build. Tell us about your operation and we'll send a free quote with your top AI opportunities.
